Bangalore, India

PROFESSIONAL SUMMARY

Computer Science Engineering graduate specializing in Data Analytics and BI Development. Proven ability to extract and manipulate massive datasets using SQL and Python, transforming raw records into production-grade Power BI and Tableau dashboards. Skilled in ETL processes, data modeling (Star Schema), and cross-functional collaboration to deliver actionable business insights while maintaining strict data integrity standards.

EDUCATION

KLE Institute of Technology

B.Tech in Computer Science Engineering (CGPA: 7.8 / 10)

Karnataka, India

2021 – 2025

TECHNICAL SKILLS

BI & Visualization: Power BI, Tableau, Dashboard Development, KPI Reporting, Wireframe Design, DAX, Power Query

Database & SQL: SQL, MySQL, BigQuery SQL, Joins, Aggregations, Subqueries, Window Functions, Performance Tuning

Data Modeling: Dimensional Modeling, Star Schema, Snowflake Schema, Data Relationships

Data Engineering & ETL: ETL Pipelines, Data Cleansing, Data Quality Validation, Data Auditing

Programming & Analytics: Python, Pandas, NumPy, Exploratory Data Analysis (EDA), Matplotlib, Seaborn

TECHNICAL PROJECTS & EXPERIENCE

Business Intelligence & Data Analyst Project (Sales Insights) | *MySQL, Power BI, DAX*

- Designed and executed an interactive Power BI dashboard tracking critical KPIs including revenue trends, regional performance, and customer analytics to drive stakeholder decision-making.
- Wrote optimized SQL queries utilizing advanced joins, aggregations, and LAG() window functions across a database of 986K+ transactions, ensuring data extraction with <0.2% variance.
- Programmed calculated measures and business logic using DAX to compute total revenue metrics of INR 98.66 Crores and localized market contribution percentages.
- Conducted Year-over-Year (YoY) trend analysis revealing a +342.7% growth spike; successfully implemented dimensional modeling and Star Schema structures for optimized BI data consumption.
- Created initial visual wireframes and dashboard UI layouts, improving report navigation speed and enabling self-service filtering options for cross-functional management teams.

Data Analytics & Revenue Optimization Project (Hospitality Domain) | *Python, SQL, Tableau*

- Developed an end-to-end Tableau visualization dashboard providing granular visibility into occupancy trends, cancellation rates by market segment, and seasonal Average Daily Rate (ADR) patterns.
- Built and executed ETL processes and data quality validation pipelines on 118K+ hotel booking records to eliminate data anomalies and ensure complete compliance with corporate reporting standards.
- Computed and monitored essential industry metrics including Occupancy Rate (62.74%), ADR (\$101), and RevPAR (\$63.37) using time-series analysis to pinpoint peak pricing windows.
- Verified analytical logic and dashboard calculations across parallel Python and SQL pipelines, ensuring rigorous performance tuning and data accuracy.
- Formulated a data refresh pipeline using scheduling logic that automated reporting workflows, reducing manual weekly reporting overhead for regional business teams.
